Varicella Chickenpox						
Varicella - date of disease		Varicella - positive screen date				*The shaded area under "Titer Date" indicates that a titer is not acceptable proof of immunity for this vaccine.

In several instances, laboratory confirmation of positive titers are an acceptable alternative to written documentation of vaccination. A positive laboratory titer report must be provided to the school to document immunity. More information on titers can be found within the Colorado Board of Health rule 6 CCR 1009-2.

† For DTaP and Tdap, both the diphtheria and tetanus titers must be positive. A titer is never acceptable to demonstrate immunity to pertussis.

‡ Laboratory confirmation of positive titers are an acceptable alternative to the MMR vaccine only when titers for all three components (measles, mumps, and rubella) are positive.
